

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: AXA World Funds Optimal Income (The “Financial Product”) **Legal entity identifier:** 2138003LHHRO8T77DX76

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

YES

NO

It will make a minimum of **sustainable investments with an environmental objective: ___%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy.

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and social characteristics promoted by the Financial Product consist of investing in:

- issuers considering their **carbon intensity**.
- issuers considering **gender diversity at board level**.

The Financial Product also promotes other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and unconventional oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labour rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labour Organisation’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by this Financial Product.

The initial investment universe of the Financial Product will be defined as composed of 30% MSCI EMU Net Total Return EUR + 10% MSCI World ex EMU Net Total Return + 10% MSCI Emerging Market + 25% ICE BofA 1-10 Year Euro Corporate + 10% Bloomberg Global Aggregate + 15% Global High Yield ICE BofA (the "Investment Universe").

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The attainment of the environmental and social characteristics promoted by the Financial Product and described above is measured with the following sustainability indicators:

- The weighted average Carbon Intensity of the Financial Product and of its Investment Universe, defined as the amount of GHG emissions (covering at least scope 1 and 2) per tons per millions \$ revenue released into the atmosphere, expressed in CO₂e tons per millions \$ revenue.
- The weighted average Women on Board defined as the percentage of female board members at the investee companies held in the Financial Product and of the Investment Universe. It is provided by an external data provider.

The Financial Product outperforms its Investment Universe on these sustainability indicators in order to promote the environmental and/or social characteristics described above.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The Financial Product intends to partially invest in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a. the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b. using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

The assessment is done at entity level and an investee company that satisfies the contribution to UN SDG criteria outlined above is considered as sustainable.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a. GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b. With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds comply with AXA IM GSS Bond Framework. We have designed our framework to be compliant with Green Bonds Principles and Social Bond Principles, adding more stringent criteria on some aspects.

Those methodologies may evolve in the future to take into account any improvements for example in data availability and reliability, or any developments of, but not limited to, regulations or other external frameworks or initiatives.

The Financial Product is not taking into consideration the criteria of the EU Taxonomy environmental objectives.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product partially intends to make means that an investee company cannot qualify as sustainable if it meets any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to "significantly contributing" to -10 corresponding to "significantly obstructing", unless the quantitative score has been qualitatively overridden. This criterion is applied on the investee companies that are considered as sustainable.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. This criterion is applied on the entire portfolio.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body. This criterion is applied on the entire portfolio.

Indicators for principal adverse impacts on sustainability factors are considered, including through the application of AXA IM’s exclusion and stewardship policies.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The Financial Product takes into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments are not harming significantly any other sustainability objectives under SFDR.

Principal adverse impacts are mitigated through sectorial exclusion policies and AXA IM ESG standards (as described below) that are applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring. No specific threshold or comparison with reference value have been defined within the DNSH approach.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product will use its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Exclusion Policies:

- **Environmental:**

Relevant AXA IM policies	PAI indicator
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)
	PAI 2: Carbon Footprint
	PAI 3: GHG intensity of investee companies

Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ³⁰⁶	PAI 6: Energy consumption intensity per high impact climate sector
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas

- **Social and Governance :**

Relevant AXA IM policies	PAI indicator
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ³⁰⁷	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

Filter based on UN SDGs:

The Investment Manager also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by the Investment Manager’s Core ESG & Impact Research. This approach enables AXA IM to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Data availability and quality is lower for the time being on certain sustainability factors related to biodiversity as an example, which may impact the coverage for the following PAI indicators: emissions to water (PAI 8), hazardous and radioactive waste ratio (PAI 9) and unadjusted gender pay gap (PAI 12). Those sustainability factors are part of the 17 objectives targeted by the United Nations SDGs (more specifically they are covered through SDG 5 “Gender equality”, SDGs 6 “Clean water and sanitation”, SDG 8 “Economic growth”, SDG 10 “Reduced inequalities”, SDG 12 “Responsible production and consumption” and SDG 14 “Life below water”) and AXA IM’s framework there enables to mitigate the worst impacts pending the increase on data availability and quality.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product does not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labour and Environment and as such, provide a methodology to help assess the good governance practices of an issuer, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. AXA IM relies on an external provider’s screening framework and excludes any companies that have been assessed as “non-compliant” to UN’s Global Compact Principles, International Labour Organisation’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

³⁰⁶ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables AXA IM to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

³⁰⁷ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables AXA IM to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

No

Principal adverse impacts are considered with both (i) qualitative and (ii) quantitative approaches:

(i) Qualitative approach to consider principal adverse impact is based on exclusion and, where relevant, stewardship policies. Exclusion applied as part of the application of AXA IM Sectorial policies and AXA IM ESG standards cover the most material sustainability factors’ risks and are applied bindingly on a continuous basis.

Where relevant, stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through its engagement activities, the Financial Product will use its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigates adverse impacts.

Through those exclusion and stewardship policies the Financial Product takes into consideration potential negative impact on those specific PAI indicators:

For Corporates:

	Relevant AXA IM policies	PAI indicator
Climate and other environment related indicators	Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
	Ecosystem protection & Deforestation policy	
	Climate Risk policy	PAI 2: Carbon Footprint
	Ecosystem protection & Deforestation policy	
	Climate Risk policy	PAI 3: GHG intensity of investee companies
	Ecosystem protection & Deforestation policy	
	Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
	Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
	Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ³⁰⁸	PAI 6: Energy consumption intensity per high impact climate sector
	Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area

³⁰⁸ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables AXA IM to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and employee respect for human rights, anti-corruption and anti bribery matters	ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises
	ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ³⁰⁹	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises
	Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
	Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereigns and Supranationals :

	Relevant AXA IM policies	PAI indicator
Social	AXA IM ESG standards with the exclusion of investee countries with severe social violations	PAI 16: Sovereign Investee countries subject to social violations
	AXA IM Compliance black-list based on international and EU sanctions	

(ii) Principal adverse impacts are also considered quantitatively through the PAI indicators' measurement and reported annually in the SFDR annex in the periodic reporting. The objective is to provide transparency to investors on significant negative impact on other sustainability factors. AXA IM measures all the mandatory PAI indicators, plus additional optional environmental indicator and additional optional social indicator.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Investment Manager selects investments by applying an extra-financial approach based on the exclusion filters as described in AXA IM's Sectorial Exclusion and ESG Standards Policies. Those sectorial exclusions cover areas such as Controversial Weapons, Climate risks, Soft Commodities and Ecosystem Protection & Deforestation and Tobacco. The ESG Standards encompass specific exclusions on white phosphorus weapons and exclude investments in securities issued by companies in violation of international norms and standards such as the United Nations Global Compact Principles or the OECD guidelines for Multinational Enterprises; as well as investments in companies which are involved in severe ESG-related incidents and investments in issuers with a Low ESG quality (which is, as of the date of this Prospectus, below 1.43 (on a scale of 0 to 10) – such number being subject to adaptation) . Instruments issued by countries where serious specific categories of violations of Human Rights are observed are also banned. More details on those policies are available under the following link: [Policies and reports | AXA IM Corporate \(axa-im.com\)](#).

The Financial Product applies a Best-in-Class selectivity approach on its Investment Universe that is bindingly applied at all times. This ESG selection approach consists in giving priority to the companies best rated from a non-financial viewpoint within their sector of activity, without favouring or excluding one sector relative to the stock market index or customized universe used as a basis for starting. The selectivity approach consists of removing at least the 20% worst values of the Investment Universe, as defined above, based on a combination of the sustainability-related exclusions applicable to the Financial Product, notably described above, and their ESG Score to the exception of bonds and other debt securities issued by public issuers, cash held on an ancillary basis and solidarity assets.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Financial Product bindingly applies at all times the following elements described below.

³⁰⁹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables AXA IM to use the PAI more effectively.

1. The Investment Manager bindingly applies at all times its Sectorial Exclusion Policies and ESG Standards Policy as a first exclusion filter.

The Sectorial Exclusions Policies exclude companies linked to Controversial Weapons, Climate risks, Soft Commodities (based on food and basic agricultural or the marine commodities), unsustainable practices relating to Ecosystem Protection and Deforestation and Tobacco.

The ESG Standards Policy (the "ESG Standards") encompass specific exclusions such as white phosphorus weapons and exclude investments in securities issued by companies in violation of international norms and standards such as the United Nations Global Compact Principles or the OECD guidelines for Multinational Enterprises; as well as investments in companies which are involved in severe ESG-related incidents and investments in issuers with a Low ESG quality (which is, as of the date of this Prospectus, below 1.43 (on a scale of 0 to 10) – such number being subject to adaptation). Instruments issued by countries where serious specific categories of violations of Human Rights are observed are also banned. More details on those policies are available under the following link: [Policies and reports | AXA IM Corporate \(axa-im.com\)](https://www.axa-im.com/en/policies-and-reports).

2. The Financial Product applies a Best-in-Class selectivity approach on its Investment Universe that is bindingly applied at all times. This ESG selection approach consists in giving priority to the companies best rated from a non-financial viewpoint within their sector of activity, without favouring or excluding one sector relative to the stock market index or customized universe used as a basis for starting. The selectivity approach consists of removing at least the 20% worst values of the Investment Universe, as defined above, based on a combination of the sustainability-related exclusions applicable to the Financial Product, notably described above, and their ESG Score to the exception of bonds and other debt securities issued by public issuers, cash held on an ancillary basis and solidarity assets.

AXA IM has implemented scoring methodologies to rate issuers (corporates, sovereigns, green, social and sustainability bonds) on ESG criteria. These methodologies allow to rate corporates and sovereign issuers and are based on quantitative data from several data providers as well as on qualitative analysis from internal and external research. The data used in these methodologies include carbon emissions, water stress, health and safety at work, supply chain labour standards, business ethics, corruption and instability.

The corporate and sovereign scoring methodologies rely on three pillars and several sub-factors that cover the most material risk factors encountered by issuers in the E, S and G fields. The frame of reference draws on fundamental principles, such as United Nations Global Compact, the OECD Guidelines, the International Labour Organisation conventions, and other international principles and conventions that guide companies and governments activities in the field of sustainable development and social responsibility. The analysis is based on the most material ESG risks and opportunities previously identified for each sector and company, with 10 factors: Climate Change, Natural Capital, Pollution and Waste, Environmental Opportunities, Human Capital, Product Liability, Stakeholder Opposition, Social Opportunities, Corporate Governance and Corporate Behaviour. The final ESG score also incorporates the concept of industry dependant factors and deliberately differentiates between sectors, to overweight the most material factors for each industry. Materiality is not limited to impacts relating to a company's operations, it also includes the impacts on external stakeholders as well as the underlying reputational risk arising from a poor grasp of major ESG issues. In the corporate methodology, the severity of controversies is assessed and monitored on an ongoing basis to make sure that the most material risks are reflected in the final ESG score. The controversies with high severity will trigger large penalties on the sub-factor scores and ultimately on the ESG scores.

These ESG scores provide a standardized and holistic view on the performance of issuers on ESG factors and enable to both promote Environmental and/or Social characteristics of the Financial Product.

The Financial Product can invest up to 10% of its net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and solidarity assets, in securities outside the investment universe, as defined above, and on the condition that the issuer is eligible based on the selectivity criteria.

3. In addition, the investment strategy outperforms its Investment Universe on at least two ESG Key Performance Indicator that are Carbon Intensity and Women on Board at all times.

4. The following minimum coverage rates apply with the Financial Product portfolio (expressed as a minimum percentage of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and solidarity assets): i) 90% for the ESG analysis, ii) 90% for the Carbon Intensity indicator and iii) 70% for the Women on Board indicator.

The ESG data (of which ESG score or SDG score wherever relevant) used in the investment process are based on ESG methodologies which rely in part on third party data, and in some cases are internally developed. They are subjective and may change over time. Despite several initiatives, the lack of harmonised definitions can make ESG criteria heterogeneous. As such, the different investment strategies that use ESG criteria and ESG reporting are difficult to compare with each other. Strategies that incorporate ESG criteria and those that incorporate sustainable development criteria may use ESG data that appear similar but which should be distinguished because their calculation method may be different. AXA IM's ESG different methodologies described herein may evolve in the future to take into account any improvements in data availability and reliability, or any developments of regulations or other external frameworks or initiatives - among others.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The initial investment universe is reduced by at least 20% through the investment strategy described above.

● **What is the policy to assess good governance practices of the investee companies?**

The Financial Product does not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labour and Environment and as such, provide a methodology to help assess the good governance practices of an issuer, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labour Organisation's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

In addition, ensuring good governance practices is also addressed by the engagement policies. AXA IM implemented a comprehensive active ownership strategy – engagement and voting – where AXA IM acts as stewards of investments made on the clients' behalf. AXA IM views engagement as a means for investors to influence, shape and shift investee company policies and practices to mitigate risks and secure long-term value. Governance practices of companies are engaged at first level by the portfolio managers and dedicated ESG analysts when meeting companies' management team. It is through the long-term investor status and in-depth knowledge of the investment targets that AXA IM feels legitimate to engage in a constructive but demanding dialogue with them.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

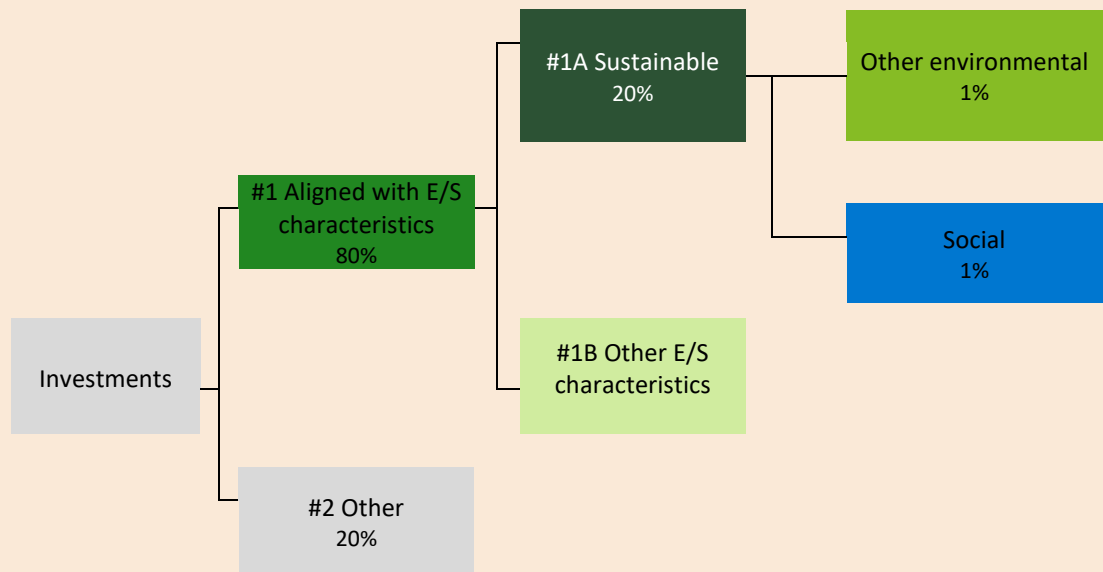

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The Financial Product aims to plan its assets' allocation as presented in the graph above. This planned asset allocation might deviate on a temporary basis.

The planned minimum proportion of the investments of the Financial Product used to meet the environmental or social characteristics promoted by the Financial Product is 80% of the Financial Product Net Asset Value.

The planned minimum proportion of sustainable investments of the Financial Product where that Financial Products commits to making sustainable investments is 20% of the Financial Product Net Asset Value.

The remaining "Other" investments will represent a maximum of 20% of the Financial Product Net Asset Value. Remaining "Other" investments are used for hedging, liquidity and portfolio management of the Financial Product. Minimum environmental or social safeguards based on AXA IM exclusion policies are assessed and applied on all "Other" assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Single names derivatives used for investment purpose apply exclusion policies and thus contribute to attain the environmental or social characteristics promoted by the Financial Product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product does not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the "do not significantly harm" criteria of the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³¹⁰ ?**

Yes

In fossil gas

In nuclear energy

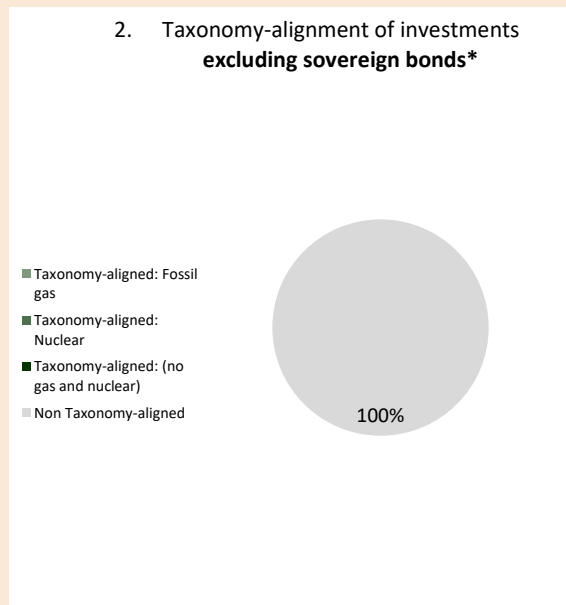

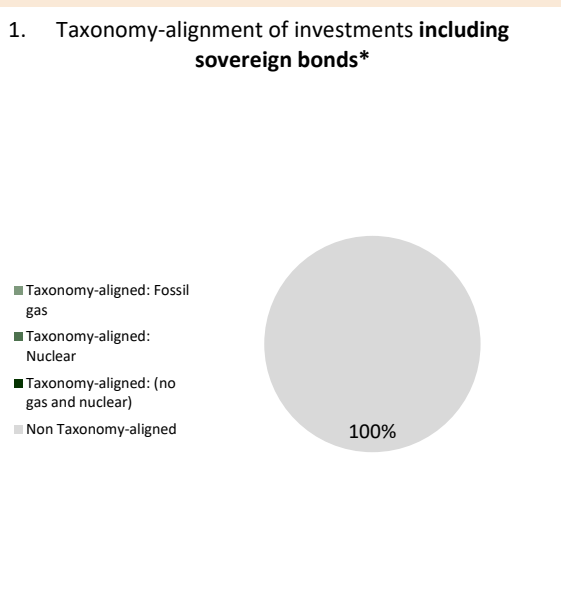

No

To comply with the EU taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 100% of the total investments**

* For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

** The proportion of total investments shown in this graph is purely indicative and may vary.

● **What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

are sustainable investments

³¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1% of the Financial Product Net Asset Value.

The proportion of investments between environmental sustainable assets not aligned with EU Taxonomy and social sustainable assets is freely allocated and adds up to at least the total sustainable investments.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with social objectives is 1% of the Financial Product Net Asset Value.

The proportion of investments between environmental sustainable assets not aligned with EU Taxonomy and social sustainable assets is freely allocated and adds up to at least the total sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

The remaining "Other" investments will represent a maximum of 20% of the Financial Product Net Asset Value. The "other" assets may consist in:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards are applied and assessed on all "other" assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable as there is no specific index designated as an ESG reference benchmark.

Where can I find more product specific information online?

More information can be found on the AXA IM fund centre following that link: [Funds - AXA IM Global](#).

More details on AXA IM sustainable investment frameworks are available on [Sustainable Finance](#) | [SFDR](#) | [AXA IM Corporate](#).
